

11 Highly Possible Catastrophic Events Worse than Climate Change

LECTURE

part

Our job as Sons is to engage with society so it can be changed by the “salt” and “light” of the Kingdom

Jesus (our prototype) demonstrated
that we are to impact society with the
Kingdom

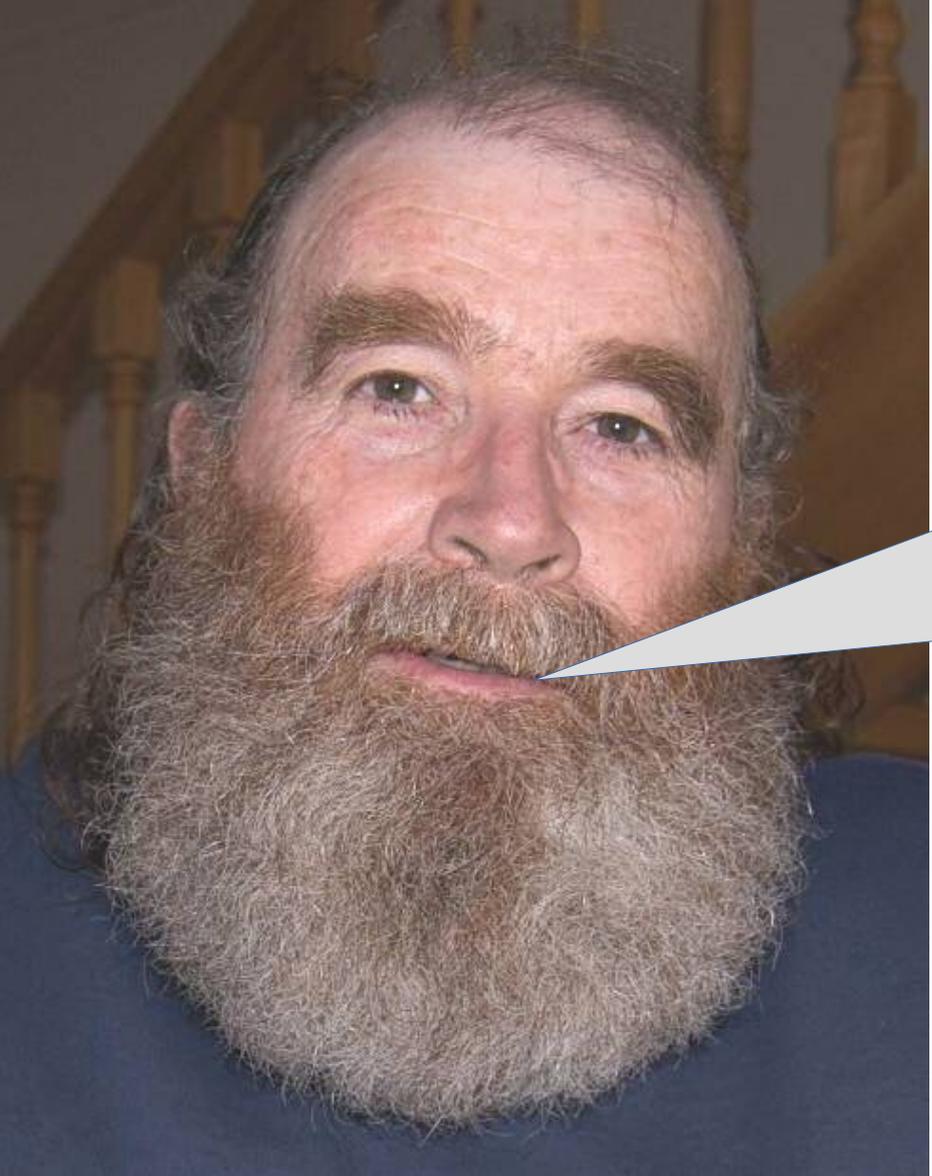

He never modelled or taught that 40-
day prayer and fasting events change
nations

Part of engaging with society is being able to enter into discussions on controversial topics and being able to calmly express differing options

We can't interact if the only thing we know anything about, that has any real value, is Christian things

So...

How can you handle the
“Climate Change Emergency”
which is distracting most people?

The basis of this talk was given to me as spiritual inspiration to provide you with the facts you need to engage with those who have succumbed to “climate emergency” dogma

You could begin by asking this question:

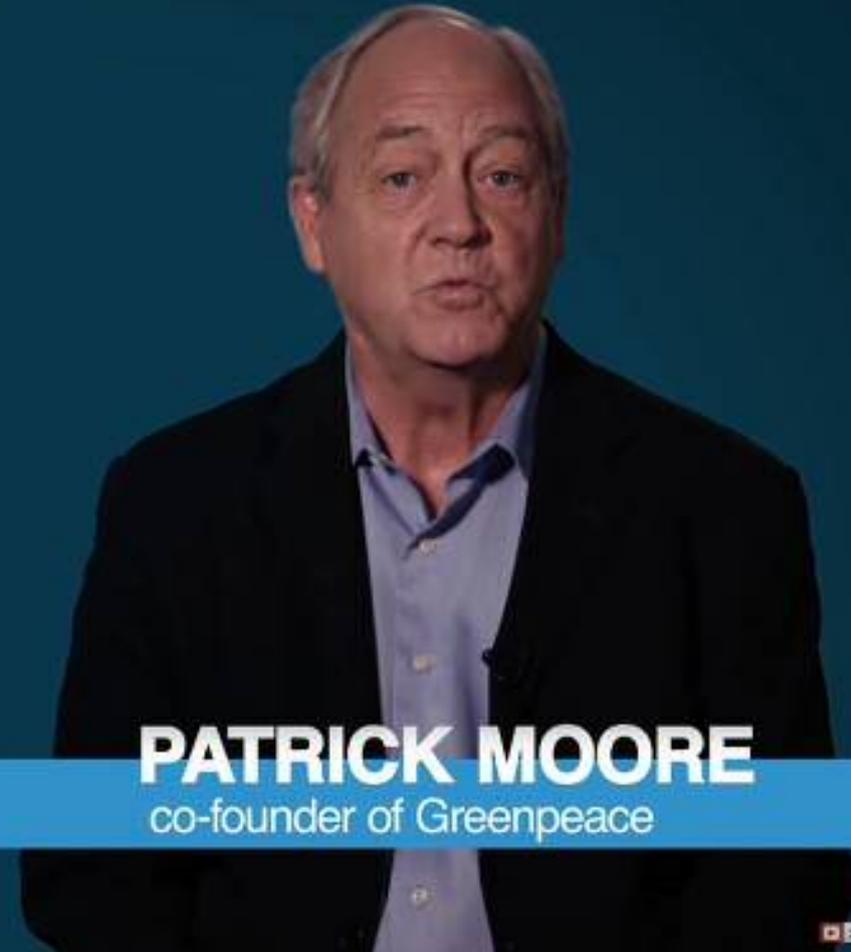

“Is anthropogenic
climate change our
greatest threat?”

Is it?

Sydney-sized iceberg breaks off Antarctica

By **Ethan James**
October 1, 2019

A huge iceberg the size of Sydney has broken away from east Antarctica, but scientists aren't blaming the fracture on climate change.

Clima, una petizione controcorrente

mercoledì 19 giugno 2019

Pubblichiamo la petizione sul clima curata dal prof. Uberto Crescenti - Professore Ordinario di Geologia Applicata della Università G. d'Annunzio di Chieti, è stato Rettore della Università G. d'Annunzio dal 1985 al 1997, Presidente della Società Geologica Italiana da 1999 al 2005, fondatore e Presidente della Associazione Italiana di Geologia Applicata e Ambientale dal 1999 al 2005, fondatore e Presidente nel 2001 della Associazione Italiana Geologia e Turismo – in collaborazione con scienziati di fama internazionale, con l'obiettivo di incentivare un serio dibattito sul futuro del nostro pianeta in base alle attuali conoscenze scientifiche e scevro da condizionamenti politici.

Al Presidente della Repubblica

Al Presidente del Senato

Al Presidente della Camera dei Deputati

Al Presidente del Consiglio

PETIZIONE SUL RISCALDAMENTO GLOBALE ANTROPICO

I sottoscritti, cittadini e uomini di scienza, rivolgono un caloroso invito ai responsabili politici affinché siano adottate politiche di protezione dell'ambiente coerenti con le conoscenze scientifiche. In particolare, è urgente combattere l'inquinamento ove esso si presenti, secondo le indicazioni della scienza migliore. A tale proposito è deplorabile il ritardo con cui viene utilizzato il patrimonio di conoscenze messe a disposizione dal mondo della ricerca e destinate alla riduzione delle emissioni antropiche inquinanti diffusamente presenti nei sistemi ambientali sia continentali che marini.

Bisogna però essere consapevoli che l'anidride carbonica di per sé non è un agente inquinante. Al contrario essa è indispensabile per la vita sul nostro pianeta.

Negli ultimi decenni si è diffusa una tesi secondo la quale il riscaldamento della superficie terrestre di circa 0.9°C osservato a partire dal 1850 sarebbe anomalo e causato esclusivamente dalle attività antropiche, in particolare dalle immissioni in atmosfera di CO₂ proveniente dall'utilizzo dei combustibili fossili. Questa è la tesi del *riscaldamento globale antropico* promossa dall'*Intergovernmental Panel on Climate Change* (IPCC) delle Nazioni Unite, le cui conseguenze sarebbero modificazioni ambientali così gravi da paventare enormi danni in un imminente futuro, a meno che drastiche e costose misure di mitigazione non vengano immediatamente adottate. A tale proposito, numerose nazioni del mondo hanno aderito a programmi di riduzione delle emissioni di anidride carbonica e sono pressate, anche da una martellante propaganda, ad adottare programmi sempre più esigenti dalla cui attuazione, che comporta pesanti oneri sulle economie dei singoli Stati aderenti, dipenderebbe il controllo del clima e, quindi, la "salvezza" del pianeta.

In Letter to UN, Scientists Say There Is No Climate Emergency

BY IVAN PENTCHOUKOV

September 24, 2019 Updated: September 24, 2019

The truth is finally
coming out...

*500 climate scientists
say...*

“There is **NO**
climate
emergency”

European Climate Declaration

There is no climate emergency, say 500 experts

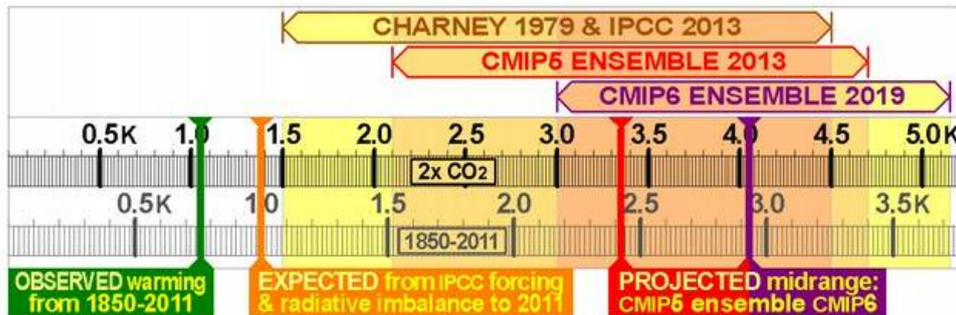

AS THE LATEST U.N. climate summit begins in New York, a new, high-level global network of 500 prominent climate scientists and professionals has submitted a declaration that there is no “climate emergency”.

The group has sent a *European Climate Declaration* with a registered letter to António Guterres, Secretary-General of the United Nations.

Professor Guus Berkhout of The Netherlands, who organized the Declaration, said: “So popular is the Declaration with scientists and researchers worldwide that signatories are flooding in not only from within Europe but also from other countries such as the United States and Canada, Australia and New Zealand.”

The group’s letter warns the U.N. that “the general-circulation models of climate on which international policy is at present founded are unfit for their purpose”.

The Declaration adds that the models, which have predicted far more warming than they should (see diagram), “are not remotely plausible as policy tools”, in that “they ... exaggerate the effect of greenhouse gases such as CO₂” and “ignore the fact that enriching the atmosphere with CO₂ is beneficial”.

The “climate emergency” that never was: Global warming predicted by climate models (purple and red cursors) is three times warming expected on the basis of officially-estimated manmade influences on climate (orange cursor) and four times observed warming (green cursor).

Here’s their press briefing

(it’s a summary)

Download PDF here

AND: Since 1998, more than 31,000 US scientists from diverse climate-related disciplines, including more than 9,000 with Ph.D.s, have signed a public petition announcing their belief that “...there is no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases is causing or will, in the foreseeable future, cause catastrophic heating of the Earth’s atmosphere and disruption of the Earth’s climate”. Included were atmospheric physicists, botanists, geologists, oceanographers, and meteorologists.

NASA admits that climate change occurs because of changes in Earth's solar orbit, and NOT because of SUVs and fossil fuels

United Nations Misleads About Food Production and Climate Change

August 30, 2019

H. Sterling Burnett

James Taylor

The UN is guilty
of
scaremongering
again

An Aug. 8 NBC News headline reads, “Climate change could trigger a global food crisis, new U.N. report says.”

“The United Nations’ own data shows farmers throughout the world are setting new production records virtually every year. In fact, the U.N. Food and Agriculture Organization reports new records were set in each of the past five years for global cereal production, which is composed of the Big Three food staples: corn, wheat, and rice.

Indeed, World-Grain.com reports in 2016 world cereal production broke records for the third straight year...These facts should not surprise anyone because hundreds of studies and experiments conclusively demonstrate plants do better under conditions of higher carbon dioxide and modestly warmer temperatures.”

Is food shortage our greatest threat?

No!!!
