Understanding Planet 9 – the unseen planet

For years scientists believed
there were *9 planets in the Solar System*

Scientists Assert That Hidden Dimensions Might Exist in Gravitational Waves

© SXS Project/YouTube

Hidden Dimensions

String theory has predicted the existence of hidden dimensions, but scientists have yet to find them. However, new work from researchers at the Max Planck Institute for Gravitational Physics of the Albert Einstein Institute (AEI) indicates that hidden dimensions could have an influence on something that physicists can detect: gravitational waves. If this is true, studying those ripples in space-time might be the key that unlocks the mystery of hidden dimensions.
