

Sincerely Wrong

Sincerity is not the mark of truth. That fact is evident all around us today as we see people who are sincerely wrong. It goes for us as well. Just because we believe something wholeheartedly doesn't make it accurate, right or true. This goes for anything and everything we believe, no matter what area it is in.

That should sober us all up. It should make us very careful about what we believe to be true and what we propagate as truth.

I know, I've been sincerely wrong many times in my life and have regretted my speech and actions years later, when I found out what I firmly believed was false.

Remember: **A person who's deceived doesn't know they're deceived because that's what deception is.**

That's 'the nature of the beast'.

That means, we need to get the truth from the source so we propagate truth. That's the logical outcome of knowing we can be easily misled and duped.

Therefore, we must find out from The Truth himself what the reality is in everything. You can't go wrong that way.

By the way, the reason we share our revelations and understandings when we meet with other like-minded sons is so we can have them tested for veracity. It's also the reason why spiritual oversight is critical, especially having genuine apostolic and prophetic elders. Alternatively, those with an apostolic and/or prophetic mantle who have been tried and tested are a good substitute for elder oversight.

Finally, the reason why we must be reprogrammed of all religion and legalism is so we can have truth placed in us by our King. That really doesn't become effective until we do.

EXAMPLE

Because we did chemistry experiments in science classes at school we probably think in the back of our mind that it's wrong to mix chemicals because there'll be a chemical reaction. We may even believe that all chemical reactions are dangerous and we should never mix chemicals. That's an example of being sincerely wrong. You see, the air and soil are mixtures of hundreds and thousands of chemicals and there's no danger there. The sea is a perfect example of a mixture of many chemicals, but there aren't any dangerous or coloured reactions between them in the oceans. Even our body contains millions of chemicals. They're so unreactive that we need thousands of enzymes and catalysts to make chemical reactions happen in our metabolism, otherwise we'd die.
