- **“Bjorn Lomborg: Fear-mongering over forest fires and climate change isn't rooted in reality”**  
*“As surely as temperatures rise during the summer, climate alarmism serves up more stories of life-threatening heat domes, apocalyptic fires and biblical floods, all blamed squarely on global warming. Yet the data to prove this link is often cherry-picked, and the proposed policy responses are enormously ineffective. Heatwaves are clearly made worse by global warming. But the non-stop media coverage of high temperatures in the summertime fails to tell the bigger story: temperature-driven deaths are overwhelmingly caused by cold. In the United States and Canada, a recent Lancet study found that 20,000 people die each year from heat, but 170,000 die from cold. Globally, the study finds 4.5-million cold deaths, which is nine-times more than global heat deaths.”*

- **“Meteorologists, Scientists Explain Why There Is ‘No Climate Emergency’”**  
*“There’s no climate emergency. And the alarmist messaging pushed by global elites is purely political. That’s what 1,808 scientists and informed professionals stated when they signed the Global Climate Intelligence Group’s “World Climate Declaration”. “Climate science should be less political, while climate policies should be more scientific,” the declaration begins. “Scientists should openly address uncertainties and exaggerations in their predictions of global warming, while politicians should dispassionately count the real costs as well as the imagined benefits of their policy measures.””*
