

# MONTHLY UPDATES

## COVID SCIENCE (December 2023)

- **★ “Australian Researchers Call for Pause on Gene-Based COVID-19 Vaccines Amid Spike in Excess Deaths”**  
*“Australia saw an increase in the number of excess deaths following COVID-19 vaccination, with authorities reporting high levels of adverse events among people who took the jabs, according to a recent study, which called for pausing the jabs.”*  
\* [www.theepochtimes.com/health/australian-researchers-call-for-pause-on-gene-based-covid-19-vaccines-amid-spike-in-excess-deaths-5551718](http://www.theepochtimes.com/health/australian-researchers-call-for-pause-on-gene-based-covid-19-vaccines-amid-spike-in-excess-deaths-5551718)

**REPORT:** [www.sciencedirect.com/science/article/pii/S0344033823007318](http://www.sciencedirect.com/science/article/pii/S0344033823007318)
- **“Bombshell Study on Vaccine ‘Ribosomal Frameshifting’”**  
*“What the study shows is that when you put a pseudouridine in where a uridine should be, the ribosome jumps or misreads messenger RNA. And as a consequence of this, it results in a bogus protein being made. So instead of making spike protein, it makes a nonsense protein that is possibly toxic.” In this episode, critical care physician Dr. Paul Marik breaks down a new study published in Nature medical journal on ribosomal frameshifting associated with the COVID-19 genetic vaccine. “There’s no one reading this paper who couldn’t understand what a fundamental disaster this actually is because it challenges the whole premise of the mRNA platform,” says Dr. Marik.”*

- **“No Evidence That Our Bodies Can Get Rid of Vaccine mRNA”**  
*“They are advancing messenger RNA for RSV, for Epstein-Barr, for influenza... This bio-pharmaceutical complex appears to be hell-bent on messenger RNA technology, no matter how unsafe it is,” says Dr. Peter McCullough. In this episode, we take a look at the latest evidence and research around the COVID-19 vaccines and mRNA vaccine technology, from ribosomal frameshifts to cancer risks.*

- **“Health Official Quits In Response to Conservative Government Overturning NZ Smoking Ban”**  
*“In a statement released on Dec. 12, the ACT Party, who are in coalition with the new government, intimated that the new government only wanted to work with like-minded advisors, saying they need to “get with the programme or get out.” “ACT welcomes the resignation of any public officials who can’t bring themselves to implement the programme outlined by the elected government,” Health and Public Service spokesperson Todd Stephenson wrote.”*

- “New Self-Replicating mRNA Vaccine Approved for Mass Production”**  
*“Two weeks ago, Japan became the first country in the world to approve a new type of self-amplifying mRNA (sa-mRNA) vaccine. A company called Meiji Seika Pharma released a statement on Nov. 28, announcing that it has been given government approval to manufacture and market their Kostaive sa-mRNA COVID vaccine. What is a self-amplifying mRNA vaccine? “Normal” mRNA vaccines work as such: a strand of modified mRNA that contains a sequence for making the spike protein of the SARS-COVID 2 virus is protected by a layer of lipid nanoparticles, which dissolves in the process of getting the mRNA strand into the body’s cells. Once this RNA strand is delivered into the cell, the cell’s machinery takes it, manufacturers the spike protein that’s encoded on it, and that spike protein ultimately leads to the immune response. That’s an extremely simplified version of how that process works. However, these new self-amplifying mRNA vaccines take this whole process a step further by integrating the genes that are needed to replicate the RNA.”*

- “Vaccine Toxicity, 3-Foot Long Blood Clots, COVID Testing—Panel Answers Critical Questions | Florida Summit”**  
*“Dr. Littell, who is the organizer of the 2023 Florida Summit on COVID, posed this same question to a panel of pathophysiology experts. “The evidence is pointing to yes,” said Dr. Ryan Cole, a pathologist and one of the panel experts. “Because DNA can persist. So with contamination and the cells taking this up, they may be making truncated, shortened proteins. They may be making a full spike protein ... There is no regulatory factory in the body or no proof as to when the production of the spike stops,” said Dr. Cole.*  
*Other questions addressed by the panel were: Do we still need to test for COVID? Do we need to vaccinate against RSV? What is the new dengue vaccine all about? What can medical students do if they are still forced into getting the shots? Why do the COVID shots vary in their toxicity from batch to batch?”*

- “Some COVID Vaccines Produce ‘Unintended Immune Response’ in Recipients: Study”**  
*“Researchers in a landmark new study have discovered a sequence within the Pfizer mRNA vaccine that produces an “unintended immune response” in the body, which experts are calling a massive “developmental and regulatory failure.”... “Researchers from the Medical Research Council (MRC) Toxicology Unit have discovered that the cellular machinery that ‘reads’ mRNAs ‘slips’ when confronted with repeats of a chemical modification commonly found in mRNA therapeutics. In addition to the target protein, these slips lead to the production of ‘off-target’ proteins triggering an unintended immune response,” said a press release for the study published in Nature on Dec. 6.”*

- “FDA System Unable to Identify Risk of Heart Inflammation After COVID-19 Vaccination”**  
*“The U.S. Food and Drug Administration could not provide information on a confirmed side effect of the Pfizer COVID-19 vaccine, according to a newly disclosed document. FDA staffers said in the document, from 2021, that one of the agency’s top surveillance systems was unable to provide details on heart inflammation after Pfizer vaccination.”*

- **“Bad News for Mask-Wearers: Study Shows Link to More COVID Infections”**  
*“According to a new study published out of Norway, people who wore face masks were actually found to be more likely to contract COVID-19 (versus those who didn’t wear face masks). Specifically, a peer-reviewed study published in the journal Epidemiology and Infection found that those who always (or almost always) wore masks were somewhere between 4–40 percent more likely to catch COVID-19.”*

- **“European Regulator Confirms Pfizer Did Not Highlight DNA Sequence in COVID-19 Vaccine”**  
*“Pfizer partner BioNTech did not highlight a DNA sequence in its COVID-19 vaccine, a European regulator has confirmed. “While the full DNA sequence of the plasmid starting material was provided in the initial marketing authorization application for Comirnaty, the applicant did not specifically highlight the SV40 sequence,” the European Medicines Agency (EMA) told The Epoch Times in an email. The email came after Health Canada told The Epoch Times it expects sponsors to identify sequences such as the Simian Virus 40 (SV40) DNA enhancer but that Pfizer and BioNTech did not. BioNTech and Pfizer have not responded to requests for comment. BioNTech did not highlight the inclusion of the enhancer in its vaccine because “it was considered to be a non-functional part of the plasmid,” EMA said. “They have since clarified this information in response to questions raised by EMA.””*
