- ★ **“A Host of Notable COVID-19 Vaccine Adverse Events: Those Backed by Evidence”**
“Since the rollout of COVID-19 vaccines, a significant number of vaccinated people have reported various adverse reactions. Some adverse events are widely acknowledged, like blood clots and myocarditis. Others are less publicly discussed but are still present in the research literature. The Epoch Times reviewed the U.S. Vaccine Adverse Event Reporting System (VAERS), the United Kingdom’s Yellow Card Reporting system, South Africa’s VAERS database, and numerous peer-reviewed studies, selecting the top reported adverse events with literature support. Their severity determines the order of the events.”

- **“Outrage Grows Over CDC Inaction on Chinese Biolab in California”**
[The power went off in the lab and frozen disease samples thawed.] “That was in March 2023, months after Ms. Harper had first discovered the biolab in December 2022 and alerted authorities. Ms. Harper found inside what was supposed to be an unoccupied warehouse, thousands of vials of potentially infectious agents, including ones labeled as coronavirus, chlamydia, E. coli, streptococcus pneumonia, HIV, hepatitis, herpes, rubella, and malaria. A freezer was labeled “Ebola” and about 1,000 lab mice were kept for experimentation... Rep. Kevin Kiley (R-Calif.) told The Epoch Times he is trying to find out from the CDC why the agency initially “looked the other way” as local officials tried to get their attention. “They [CDC] didn’t investigate for months and months and months and months,” Mr. Kiley said.”

- **“CDC-Funded Study of Nearly 100 Million COVID-19 Vaccine Recipients Reveals a Host of Adverse Events”**
“A multinational study of over 99 million vaccinated people has identified higher incidences of neurological, cardiovascular, and blood disorder complications than what the researchers expected. The peer-reviewed observational cohort study, published in the Vaccine journal on Feb. 12, aimed to evaluate the risk of 13 adverse events of special interest (AESI) following COVID-19 vaccination. The AESIs spanned three categories—neurological, hematologic (blood), and cardiovascular. It reviewed data collected from more than 99 million vaccinated people from eight nations—Argentina, Australia, Canada, Denmark, Finland, France, New Zealand, and Scotland—looking at risks up to 42 days after getting the shots.”

- **“COVID Vaccine Shedding Is ‘Real,’ FDA and Pfizer Documents Are Proof”**

“The topic of COVID-19 vaccine shedding has long been controversial, but now, some doctors say even the authorities know about it. “Shedding is unfortunately real,” said Dr. Pierre Kory at the Front Line COVID-19 Critical Care Alliance (FLCCC) conference in Phoenix, Arizona, in early February. “The FDA (U.S. Food and Drug Administration) knows that.” Dr. Kory is a co-founder of the FLCCC, a non-profit advocacy group founded by physicians for the treatment of COVID-19, long COVID, and post-vaccine syndromes. He is also the co-founder of the Leading Edge Clinic and has treated over a thousand long-COVID and post-vaccine patients.”

- **“Vaccinated People Can Still Transmit Disease, FDA and CDC Officials Admit”**

“Public health officials from the Food and Drug Administration (FDA) and the Centers for Disease Control and Prevention (CDC) admitted that people vaccinated with the COVID-19 vaccine can still get COVID and can transmit COVID at a Feb. 15 congressional hearing. At the hearing by the Select Subcommittee on the Coronavirus Pandemic, Rep. Michael Cloud (R-Texas) asked if the vaccine prevented people from transmitting the virus. “There’s data that shows that earlier in the pandemic there was some reduction in transmission. The data on that are very challenging to pin down. It does not absolutely prevent transmission,” said Dr. Peter Marks, one of the hearing witnesses and the director of the Center for Biologics Evaluation and Research at the FDA.”

- **“COVID-Lab Origin: The Case Is Even Stronger Now”**

“I had previously made the case that the totality of circumstances surrounding SARS-CoV-2 origins is sufficient for probable cause to believe the virus originated in a lab. In addition to the circumstances surrounding the origin of SARS-CoV-2, the evidence we lack for a zoonotic origin makes our case even stronger. Outside the narrow lens of mainstream media outlets unable to cover this globally pertinent forensic case, the biggest scientific murder-mystery of the century is being solved. New evidence has emerged to strengthen the lab origin case. The flawed papers claiming a zoonotic origin have been revealed as even more hopelessly flawed—while those of us independent subject matter experts could see this from the beginning, now it is becoming more obvious even to the lay public. Additionally, the lab-origin theory has made remarkable predictions about the contents of recently FOIA’d drafts of the DEFUSE grant.”

- **“Long-Term Increased Risk of Digestive Diseases After COVID-19 Infection: Study”**
“As COVID-19 cases continue to rise, an increasing number of people are experiencing digestive diseases. Recent research has revealed that COVID-19 infection increases the long-term risk of digestive diseases, with a notable rise even in mild cases. A large-scale retrospective cohort study published in the BMC Medicine journal on Jan. 10 indicated that individuals previously infected with COVID-19 have a higher risk of developing digestive diseases.”

- **“Dr. Pierre Kory Explains COVID-19 Vaccine Shedding”**
“For years now, we’ve heard rumblings about COVID-19 vaccine shedding. Unvaccinated women talk of menstrual abnormalities after coming into close contact with vaccinated individuals. Some recently vaccinated mothers report babies experiencing bad reactions after breastfeeding. So what is this phenomenon? Is it real? And if so, what kinds of people are most affected? In this episode, I sit down with Dr. Pierre Kory, co-founder of the FLCCC Alliance and former chief of the Critical Care Service at the University of Wisconsin. He has been researching COVID-19 vaccine shedding, and he’s written a nine-part series on his Substack of what he’s uncovered thus far.”

- **“COVID Variants Resist Antibodies From 2nd, 3rd COVID-19 mRNA Vaccines”**
“All COVID-19 variants, including omicron, are resistant to vaccine-induced antibodies, meaning that they are less responsive to the vaccine, as shown in a study published in the journal Vaccine. However, this resistance could be temporarily overcome with additional COVID-19 shots.”

- **“Moderna Scientists Expose Origin of Toxicity Within Vaccine”**
“A new paper published by Moderna scientists found that the technology used in Moderna’s COVID vaccine carries the risk of toxicity. Specifically, the paper was published 2 weeks ago in the Nature Review magazine under the title: Strategies to reduce the risks of mRNA drug and vaccine toxicity. And in it, they confirmed an earlier, leaked, white paper from within Pfizer which postulated that the lipid nanoparticle encasing the mRNA payload within the vaccines might be the root cause of the many side-effects that people experience post-jab.”

- “Doctor Reports ‘Alarming Increase’ in Vaccine Injuries Among Elderly”

“A leading physician at the largest retirement community in the United States is seeing an “alarming increase” in COVID-19 vaccine injuries among her patients. At a Jan. 26 press conference, held at the Waterfront Inn at Sumter Landing in The Villages, Florida, Dr. Marivic Villa reported that the vaccine injuries are especially prevalent in patients over the age of 64. “A vaccine injury is a normal response of your immune system,” she told the crowd at the press conference. “Usually, the immune system will protect you. But it’s attacking you.””
