## COVID SCIENCE (March 2023)

- “Report shows Australia’s excess mortality rate has risen to levels not seen since”  
“A new study released this week has shown Australia is experiencing its highest excess mortality rates in over 80 years. According to the Actuaries Institute, there was a 12 per cent increase in excess deaths in 2022. Of the additional 20,000 deaths, 10,300 were attributed to Covid-19 — with another 2,900 deaths where the virus was a contributing factor. The remaining 6,600 excess deaths were not related to Covid-19, with ischaemic heart disease and cancer being the most common causes, leading to 2,020 and 970 excess deaths respectively. Karen Cutter, the spokesperson for the Institute’s Covid-19 mortality working group, emphasised that the increase of 20,000 deaths is extraordinary and has not been witnessed since World War II.”

- “Are Australian Excess Deaths Caused by the COVID-19 Vaccine? (Part 1)”  
“A new preprint by Wilson N. Sy, PhD, Director of the Biotechnology Unit at Investment Analytics Research located in Australia, finds that excess deaths in Australia in 2021-2022 were likely due to mRNA injections, not COVID-19 mortality.”

- “Are Pandemic-Related Excess Deaths Due to COVID or Vaccines? Depends on Who’s Counting (Part 2)”  
“In Part 1 of this report, we reviewed a recent preprint linking excess deaths in Australia to the mRNA vaccine campaign. In Part 2, we consider the challenge of identifying the root cause of excess deaths, whether from COVID-19 or non-COVID-19 causes, such as vaccine adverse events or public health restrictions.”

- “‘Speed of Science’ — A Scandal Beyond Your Wildest Nightmare”  
“It was never about data or science; it was about following the top-down script they had from the beginning. And this recent admission by a Pfizer executive proves it would be called out as fraudulent in any other industry. So how have they managed to pull the wool over so many people’s eyes?”

- “The Gut Bacteria That’s Missing in People Who Get Severe COVID”  
*“Dr. Sabine Hazan is a gastroenterologist and CEO of Progenabiome. She is an expert on gut bacteria. When she started studying the microbiomes of COVID-19 patients, she quickly noticed a pattern. “The people that had severe COVID lacked a certain bacteria called bifidobacteria,” she says. In this episode, she breaks down how a healthy gut impacts people’s outcomes from COVID-19, and what steps people can take to improve their gut health and overall immunity. With the knowledge Hazan gained from studying the microbiomes of COVID-19 patients, she developed and patented treatment protocols combining vitamins and drugs that increase bifidobacteria including vitamin C, vitamin D, hydroxychloroquine, and ivermectin.”*

- “Vision Impairments in Patients After COVID-19 Vaccination, Doctors Caution Possible Risks”  
*“Alabama-based neurologist and neuroradiologist Dr. Diane Counce told The Epoch Times that since the vaccine rollouts, she has also seen many patients who, after vaccination, would develop migraines, or experience a worsening or increased frequency of symptoms. These migraines would often manifest with temporary blindness. Counce’s clinic has treated around 300 long-haul and postvaccine patients, and she has noticed that her long-COVID patients tend to have symptom presentations that are more understood, “more textbook presentation,” while the patients who developed symptoms after vaccination may develop more severe and unexplainable symptoms... According to data from the U.S. Centers for Disease Control and Prevention’s (CDC) [Vaccine Adverse Event Reporting System \(VAERS\)](#), around 70 percent of eye pain, blurry vision, and visual impairment reports were filed for COVID-19 vaccines, as well as over 50 percent of all eye swelling reports.”*
