## COVID SCIENCE (March 2024)

- **★ “CDC Emails Reveal Why Agency Killed Alert on Myocarditis”**  
*“In a previous episode, we discussed how (after seeing the rise of myocarditis cases among the vaccinated) — all the way back in 2021, the CDC drafted up an emergency alert to be sent out to the whole country, warning people that the vaccines were connected to heart inflammation. The alert was intended to go out via the CDC’s Health Alert Network — which is a system that reaches upwards of a million doctors, Healthcare workers, local health officials, politicians, and so on. However, despite drafting the alert, it was never sent out.”*

- **“Optimistic Mindset Linked to Poor Decision Making”**  
*“Although a positive mindset is often associated with success, a new study suggests that excessive optimism often leads to poor decision-making, especially when it comes to finances. The study, conducted by the University of Bath in the United Kingdom and published in the Personality and Social Psychology Bulletin, sought to determine whether people with an optimistic mindset had worse decision-making cognition than people who were more realistic. The researchers found that people with lower cognitive function tended to be more optimistic, which led them to make poor financial decisions.”*

- **“People Who Received Ivermectin Were Better Off, Study Finds”**  
*“People who tested positive for COVID-19 and took Ivermectin as a treatment recovered faster than a comparison group, a new study found. The time to self-reported recovery was a median of two days faster among the Ivermectin recipients, according to the large UK study. The quicker recovery period was statistically significant.”*

- **“FDA Forced to Remove Anti-Ivermectin Posts Claiming It’s Horse Medicine”**  
*“In a major win for doctors fighting back against the government, the FDA agreed to remove both the social media posts and government webpages urging Americans to not take ivermectin as a treatment for COVID-19. The settlement, which came out of a federal court in the Southern District of Texas, has the FDA deleting several webpages, including a page titled “Should I take ivermectin to prevent or treat COVID-19? No.” as well as another page titled “why you should not use ivermectin to treat or prevent COVID-19.” Furthermore, besides the webpages, the FDA also agreed to delete social media*

posts in which it strongly urged people to not take ivermectin. In exchange for doing this, the doctors who are currently suing the agency agreed to dismiss their claims.”

- **“Study Shows 1 in 5 Australians Experiencing Long COVID After Positive Test”**

*“Around one in five Australians who tested positive for COVID-19 displayed symptoms consistent with long COVID, according to a study by the Australian National University (ANU). This comes after Queensland’s Chief Health Officer John Gerrard called for the term “long COVID” to be scrapped following a study that found the long-term effects of the virus were no different from the seasonal flu, and that long-term COVID symptoms were not “unique and exceptional” to other viral infections.”*

- **“Australian Senate to Investigate Excess Deaths in ‘World First’ Inquiry”**

*“The motion managed to pass the Senate by a narrow margin of 31 to 30, and will be a ‘world-first’ inquiry into the issue of excess deaths since COVID-19... According to a research paper (pdf) published by the parliamentary library in December 2023, there were an estimated 18,600 to 20,200 more deaths (“excess deaths”) in 2022 than might have occurred in the absence of the COVID-19 pandemic.”*

- **COVID-19 Response Enquiry: “We Were Demonised’: Quarantined Australians Among 2,000 Submissions to COVID-19 Inquiry”**

*“The COVID-19 inquiry is reviewing the Commonwealth government’s response to the COVID-19 pandemic and accepted submissions between Nov. 6 and Dec. 15. The COVID-19 Response Inquiry panel said they had been “overwhelmed” by the openness and willingness of more than 2,000 people and organisations who had taken the time to share their insights. “There was a common theme in the submissions of wanting to capture the lessons learned, before they were lost to the passage of time,” the panel said.”*

- **“Spike Protein Contamination: Study Calls for mRNA Vaccines to Be Suspended Over Blood Bank Concerns”**

*“At this moment, in America, there is no distinction within the U.S. Red Cross between blood that was donated by vaccinated versus unvaccinated individuals. When you donate blood, the organization asks you whether you’ve received the COVID-19 vaccine, but that has nothing to do with your eligibility... Furthermore, on the receiving end, if you need a blood transfusion, there’s no real way for you to know whether or not the blood that you’re getting came from a vaccinated or unvaccinated source. And while the FDA and the Red Cross see no problem with this situation (writing on their respective websites that the mRNA injections do not pose a risk to the recipient), a new study calls this premise into question.”*

*“One of Australia’s top doctors is calling for the term “long COVID” to be scrapped following a study that found the long-term effects of the virus was no different to the seasonal flu. In a statement on March 15, Queensland’s Chief Health Officer John Gerrard said the term “long COVID” wrongly*

implied that long-term COVID symptoms were “somehow unique and exceptional” to other viral infections. “We believe it is time to stop using terms like ‘long COVID,’” Dr. Gerrard said.”

*“Senator Gerard Rennick has alleged—under parliamentary privilege in the Senate—that the Therapeutic Goods Administration is “overriding the decision of the specialists” in refusing claims for vaccine injury from people who received COVID-19 vaccinations. Services Australia administers the scheme, which offers people a way to seek a one-off compensation payment, instead of going through legal proceedings, if they experienced harm from a vaccine.”*

- **“Higher Risk of Seizures in Toddlers Shortly After COVID Vaccination: FDA Study”**  
*“Toddlers and other young children faced a higher risk of seizures shortly after COVID-19 vaccination, according to a new study from U.S. Food and Drug Administration (FDA) researchers. The incidence of febrile seizures was 2.5 times higher among children within a day after receiving a Moderna shot than among the same children 8 to 63 days after vaccination, the researchers said.”*

- **“Pfizer Finally Releases Myocarditis Study for Children Who Received COVID-19 Vaccine”**  
*“Pfizer and its partner BioNTech have finally released the results of clinical trials exploring whether their COVID-19 vaccine causes subclinical heart inflammation. The companies found that multiple vaccine recipients suffered heart-related symptoms, but said none met the definition of myocarditis, or heart inflammation.”*

*“A new scientific paper finds COVID-19 was more likely caused by an unnatural lab origin than a natural animal source. The paper, led by researchers at the University of New South Wales (UNSW), was published in the journal Risk Analysis on March 15. Scientists looked into theories on the natural origin of SARS-COV-2 from an animal source and unnatural origin from a laboratory.”*

- **“The Ugly History of Vaccines: Part 1”**  
*“In 2008, Dr. Suzanne Humphries noticed that her patients were being vaccinated in the hospital she worked at with a signature bearing her name. She did not consent to this, but it was part of a new hospital policy at the time. This incident pushed her to look into vaccination. She spent the next ten years in the depths of medical research, vaccination history, immunology and the child vaccination program. From smallpox to polio to modern times. The results of her research have been eye-opening, which she has published in two books, “Dissolving Illusions” and “Rising From The Dead”.”*

- **“The Ugly History of Vaccines: Part 2”**  
*“Dr. Suzanne Humphries is a researcher and author of “Dissolving Illusions: Disease, Vaccines, and The Forgotten History.” Today we discuss the potential solutions to vaccines. From herd immunity to some unsettling consequences of vaccinating 100 percent of the population. Dr. Humphries also explains which vaccines we might not need at all, and through her personal experience sheds light on how one-sided our healthcare system is towards this topic.”*

- **“Report Criticizes ‘Catastrophic Errors’ of COVID Lockdowns, Warns of Repeat”**  
*“It was four years ago, in March 2020, that health officials declared COVID-19 a pandemic and the United States began shutting down schools, closing small businesses, restricting gatherings and travel, and implementing other lockdown measures to “slow the spread” of the virus. To mark that grim anniversary, a group of medical and policy experts released a report, called “COVID Lessons Learned”, which assesses the government’s response to the COVID-19 pandemic. According to the report, that response included a few notable successes, along with a litany of failures that have taken a severe toll on the population.”*

*““We’re up to over 1.6 million reports in VAERS in the context of these products ... The numbers keep going up,” says Jessica Rose, an immunologist and independent researcher. She recently co-wrote a paper examining the data surrounding the COVID-19 vaccine adverse events. It was the first published paper to call for a global moratorium on the COVID-19 genetic vaccines. But a few weeks later, the journal Cureus decided to retract the paper.”*

- **“Vaccinated Women Get Irregular Menstrual Cycle, Heavier Bleeding: Studies”**  
*“You might remember how, a few years ago, during the height of the vaccine media propaganda blitz, there was anecdotal evidence emerging of women who claimed that their menstrual cycles were affected by taking the shots. Their accounts were marginalized (and sometimes outright dismissed) by a media apparatus (as well as social media fact-checkers) whose only goal was to get more shots into more arms. However, now that things have cooled down and real research is being conducted, studies show that women’s menstrual cycles are being impacted by the COVID-19 vaccines.”*

*“Recently, Mr. Chen (pseudonym) from Changsha, Hunan, disclosed to the Chinese language edition of The Epoch Times that his friend holds a leadership role in a local hospital. “He told me directly: the government is instructing health departments across the country to eradicate all COVID-19-related data, including information on the entire epidemic prevention process and vaccination records. They must obliterate all data without leaving a trace, and computer records must be deleted entirely,” said Mr. Chen. Mr. Chen said the person said that the directive is nationwide.”*

*“A supreme court in Queensland has ruled that COVID-19 vaccine mandates imposed by the state government on police officers and ambulance service workers during the pandemic were unlawful under human rights laws... The rulings did not include judgements on the transmissibility of a particular variant of the COVID-19 virus or the effectiveness of a specific vaccine. The Brisbane Supreme Court’s rulings come just a week after an appeal court in New Zealand upheld a judgement that the COVID-19 vaccine mandates imposed by the New Zealand Defence Force during the pandemic were unlawful.”*
