

MONTHLY UPDATES

COVID SCIENCE (May 2023)

- **“FDA Sounds Alarm on COVID Vaccines for Kids”**
“According to a new federally-funded study, children between the ages of 12 and 17 who took the Pfizer vaccine face an elevated risk of heart inflammation, with the elevated risk being present within seven days post-vaccination. While many already knew that, the number of myocarditis and pericarditis events found in this particular age group met the threshold for what’s known as a “safety signal” as defined by the CDC, according to the FDA researchers who were conducting this study.”

- **“Over 300 COVID-19 Papers Withdrawn for Not Meeting Standards of Scientific Soundness”**
“Research journals have withdrawn well over 300 articles on COVID-19 due to compromised ethical standards and concerns about the publications’ scientific validity. Retraction Watch has provided a running list of withdrawn papers on COVID-19 ranging from “Acute kidney injury associated with COVID-19” to “Can Your AI Differentiate Cats from COVID-19?” A total of 330 research papers have currently been retracted.”

- **“Retraction inaction: How the pandemic has exposed frailties in scientific publishing”**
“Relatively early in the COVID-19 pandemic, three scientific papers were published about the new, highly-contagious virus that have since become notorious. All used fake or suspect patient data, and were either retracted by the prominent medical journals that published them or removed altogether. Unfortunately, the damage was already done, despite the retractions, because the papers had already been cited by other researchers in the field, and reported on in mass media. Even worse, the papers continued to be cited even after being retracted by the journals in question. Retraction is supposed to safeguard against error and misconduct, and should stop bogus or incorrect research from impacting scientific ideas and clinical practice, but that’s not how it played out in these high-profile cases, during a global pandemic.”
lens.monash.edu/@medicine-health/2022/10/17/1385133/retraction-inaction-how-the-pandemic-has-exposed-frailties-in-scientific-publishing
- **“Flawed COVID-19 Papers Cited an Average of 53 Times per Paper in Research and Media”**
“An investigation into COVID-19 research found that among the more than 270,000 papers that have been published since the start of the pandemic, 212 retracted papers were cited 2,697 times, with a median of seven times and an average of 53 times per paper. A retracted study linking the antimalarial drug Hydroxychloroquine to an increased risk of mortality and heart arrhythmia was the most cited paper with 1,360 citations at the time of data extraction.”

- “Repeated COVID-19 Vaccination Weakens Immune System: Study”**
“Repeated COVID-19 vaccination weakens the immune system, potentially making people susceptible to life-threatening conditions such as cancer, according to a new study. Multiple doses of the Pfizer or Moderna COVID-19 vaccines lead to higher levels of antibodies called IgG4, which can provide a protective effect. But a growing body of evidence indicates that the “abnormally high levels” of the immunoglobulin subclass actually make the immune system more susceptible to the COVID-19 spike protein in the vaccines, researchers said in the paper.”

- “The Vax-Genes Files: An Accidental Discovery”**
“The story begins with Kevin McKernan, a scientist with 25 years of experience in the genomic field and a leading expert in sequencing methods for DNA and RNA. He has worked on the Human Genome Project and more recently in medicinal genomics involving DNA sequencing. In the process of trying to sort out a sequencing problem, McKernan used anonymously sent Pfizer and Moderna COVID-19 bivalent vaccines to act as mRNA controls...DNA popped up and I thought ‘Oh, that’s a bigger problem.”

- “CDC Drops Bombshell on the Vaccinated”**
“There was a COVID outbreak at the CDC’s 2023 Annual Epidemic Intelligence Service Conference. After conducting a survey, the CDC discovered that a full 12 percent of their attendees contracted COVID during the event. But here’s the kicker: out of the 181 confirmed COVID cases... 100 percent of the people were vaccinated. All of the people who contracted COVID had already received the COVID vaccine. However, because no one was hospitalized, the CDC presented this situation in their report as an example of how effective the vaccines are!”

REPORT: www.cdc.gov/media/releases/2023/s0526-eis.html
- “The Spike Goes to Every Organ System”**
“At the FLCCC Conference last month, I sat down with critical care physician and FLCCC co-founder Dr. Paul Marik to get an update on what we currently know about spike protein-induced diseases in people who’ve contracted COVID-19, versus those who’ve gotten the vaccine. “When you get the jab, the amount of spike protein is exponentially higher than with natural infection. And that’s why we see all these complications from the vaccine,” explains Dr. Marik. We discuss the best treatments for ridding the body of spike protein, and how patients can embrace and enhance their ability to heal themselves.”

- “‘Millions of Lives Lost’ in Pandemic Mainly From Pharma-Government Nexus, Says Critical Care Expert”**
“Dr. Pierre Kory, a pulmonary and critical care medicine specialist, is blaming the nexus between the pharma industry and the government along with corrupt medical journals for deceiving the public about COVID-19 and vaccines, which resulted in “millions of lives lost.” “I always knew pharma was bad. I didn’t understand that they are literally a criminal syndicate, who have been committing crimes for decades. They pay fines, then move on and continue their standard operating business,” Kory said.”

- “Leaked Pentagon Report Forensically Dismantled Fauci-Led Natural Origin Study”**
“Researchers at the Department of Defense wrote a devastating takedown in 2020 of the Proximal Origin study that was used by Dr. Anthony Fauci as proof that the COVID-19 virus had come from nature. The takedown, dated May 26, 2020, was written in the form of a working paper called “Critical analysis of Andersen et al. The proximal origin of SARS-CoV-2.” It was authored by Cmdr. Jean-Paul

Chretien, a Navy doctor working at the Defense Advanced Research Projects Agency, and Robert Cutlip, a research scientist at the Defense Intelligence Agency. The paper came to light on May 15, when it was leaked to the public via virus origins search group DRASTIC (Decentralized Radical Autonomous Search Team Investigating COVID-19).”

- **“Top US Hospital: For Every Vaccine Dose, Rate of COVID-19 Infection Goes Up”**
“FORT WORTH, TEXAS—A top U.S. hospital has a study in pre-print that shows the more COVID-19 shots their employees get, the higher their chance is of catching COVID-19 itself. The Cleveland Clinic is the world’s largest network of hospitals and outpatient facilities. “When a study comes out of Cleveland Clinic, people take it very seriously,” said Steve Kirsch on Frontline Health.”
