

MONTHLY UPDATES

NET-ZERO EXPOSÉ (April 2024)

- ★ **“Nitrogen Crisis' Is Just a Pretext to Steal Farmers' Land, Implement Globalist Agenda”**
“While in the Netherlands filming our documentary “No Farmers No Food,” we sat down with Eva Vlaardingerbroek. She explained to us the perilous situation that Dutch farmers have found themselves in, why none of the actions taken by the government seem to make logical sense, as well as what the true goals and motives are behind the push to expropriate the farmers' land.”

- **“Major wind farm withdrawn after more planning delays, downsizing, name changes and fierce opposition”**
“Renewable energy company Ark Energy – a subsidiary of north Asia industrial giant Korea Zinc – says it has withdrawn its proposed but heavily contested Woorora Station wind farm after repeated delays in the federal government planning process, and after indications that it was unlikely to get approval. The 294 MW project, formerly known as the Chalumbin wind project, had been downsized and redesigned at least twice in a bid to reduce environmental impacts and respond to local concerns, which were mostly focused on its adjacency to a World-Heritage-listed rainforest west of Cairns. It was originally envisaged to support up to 200 turbines, but this was whittled back to 95 and then 86 turbines, and finally reduced to 42 wind turbines and a capacity of 294 MW, and confined to a single former cattle grazing property near Ravenshoe in the Atherton Tablelands. Ark Energy says the property has been degraded and already hosts an electricity substation and high voltage powerlines, but opposition from some local groups, amplified by conservative media and right wing think tanks, focused on its proximity (one km) to national parks that form part of the Wet Tropics of Queensland World Heritage Area.”

- **“How Climate Change Narrative Is Preventing Africa From Modernizing and Prosperity”**
“In November 2023, to reduce carbon dioxide emissions from fossil fuel use, the President of the Republic of Kenya, William Ruto, cut subsidies for fertilizer, fuel, and electricity for the 2023/2024 financial year. He did so at the behest of the International Monetary Fund (IMF), a financial agency of the United Nations (UN).”

- **“Australian EV charging manufacturer Tritium goes into administration”**
“Australian electric vehicle (EV) charging equipment manufacturer Tritium, which had pivoted to the US market, has declared itself insolvent. Troubled Tritium, in a filing on April 18, 2024 with the US Securities and Exchange Commission (SEC), has called for an administrator to be appointed.”

- **“Electric car chargers ‘flawed’ and faulty: ex-Tritium employees”**
“CarExpert spoke with numerous ex-Tritium employees on the condition of anonymity to shed light on the company’s apparent mismanagement from the top, and the quality of the chargers produced. “There were a lot of design flaws [in the chargers] that were mostly ignored. People at the top refused to make the necessary changes,” one former employee told CarExpert.”

- **“Queensland Locks in 75 Percent Emissions Target by 2035”**
“The Miles Labor government has passed legislation entrenching a 75 percent cut to climate change emissions by 2035. The legislation also locks in 80 percent renewable energy generation by 2035, and 50 percent by 2030. Liberal-National Party parliamentarians backed the climate emissions targets, but not legislating them. “Three renewable energy targets of 50 percent renewable energy by 2030, 70 percent by 2032, and 80 percent by 2035 have been locked in”, the government said in a statement, after the Clean Economy Jobs Act 2024 and Energy (Renewable Transformation and Jobs) Act 2024 passed on April 18.”

- **“How Big Tech Is Consuming America’s Electricity and Water”**
“As federal net-zero policies attempt to shift transportation, heating, and other essentials onto the electric grid, one of the hottest growth sectors of America’s economy is poised to increase electricity demand exponentially, further straining an energy infrastructure that is being pushed into the red. Data centers, the so-called “brains of the internet”, are industrial warehouses packed with rows upon rows of servers. They process, communicate, and store the data behind everything from bank records, online retailers, and social media platforms to Netflix shows and your personal iPhone videos.”

REPORT: www.energy.gov/articles/doe-finalizes-efficiency-standards-lightbulbs-save-americans-billions-household-energy
- **“Deeper Cuts to Carbon Emissions Under Draft 2035 Target”**
“The end goal of net zero by 2050 has bipartisan support, although the major political parties remain at loggerheads on how to get there. Meanwhile New South Wales (NSW), Victoria, Queensland and Tasmania, which together account for three-quarters of the nation’s emissions, have already announced 2035 emissions reductions targets of at least 70 percent. The nation’s first 2035 target must be finalised in coming months and submitted in 2025 to meet the federal government’s obligations under the Paris Agreement on climate change.”

- **“Transition From Fossil Fuels Will Mean Higher Power Prices: Energy Chief”**
“Building more generation capacity is going to impose significant costs on consumers, and nuclear is not the answer, Alinta Energy CEO Jeff Dimery says.”
* www.theepochtimes.com/world/transition-from-fossil-fuels-will-mean-higher-power-prices-energy-chief-5626574
SPEECH REPORT: www.news.com.au/finance/money/costs/alinta-ceo-jeff-dimery-says-aussies-must-acknowledge-hard-truths-in-netzero-transition/news-story/8497372f3debf0810cd6bc57f32bc93d
- **“This Obsession With Carbon Dioxide Emissions Has Led to Tragedy”**
“NTD’s Lee Hall sits down with Rupert Darwall, author and senior fellow of the RealClearFoundation. Rupert talks about green virtue signalling, the death of Britain’s car industry, and why he thinks the

economics of environmentalism are even worse than Marxism.”

- **“Solar Panel Waste Predicted to Hit 1 Million Tonnes by 2030: Australian Research”**

“The volume of solar panel waste is rising rapidly in Australia, predicted to reach 280,000 tonnes within one year and one million tonnes within a decade. According to a new study by the Australian Centre for Advanced Photovoltaics, led by experts from the University of New South Wales (UNSW), the challenge of dealing with significant levels of solar PV waste would come within the next two or three years.”

- **“What’s Behind the Push to Stop Eating Beef?”**

“Across the Western world, we’re hearing growing calls to stop eating meat—and especially beef—to combat climate change. But is this really about saving the planet? “They’re trying to take the animal and the soil out of our consumption model, and turn it into basically something that’s grown and produced in the labs,” argues Texas Slim, founder of The Beef Initiative. The campaign against beef is just one part of a radical transformation that both our food and our health have been subjected to over the last half-century, says Texas Slim. A study in 2018 showed that 88 percent of American adults are metabolically unhealthy. What are the root causes? And how do we turn this situation around?”

- **“What If Renewable Energy Is a Racket?”**

“Now, you might ask yourself: Why didn’t the builders and owners of this boondoggle think about this possibility? The answer is always the same: federal subsidies. They have encouraged the conversion of hundreds of miles of ranch, farm, and drilling land in Texas to become solar farms. None of this would even exist without this artificial prodding from our central planners.”
