(January 2022)

- “New Push for ‘Oral Vaccines’ to Vaccinate People Using Food”
“There is a new push to vaccinate people using food. The programs and experiments on “oral vaccines” are described in scientific papers, and represent what some believe is the future of vaccines. The products can be grown through bio-engineered vegetables and have the effect of administering a vaccine when consumed.”

- “A Flu Bug’s Worst Enemy, It Chews Them Up and Spits Them Out”
“Natural killer (NK) cells, a specific type of white blood cell, are an important component of your innate immune system. Your immune system consists of two different branches — cell-mediated immunity (innate) and humoral immunity (adaptive). When you contract a viral disease, the pathogen enters your body and infects your cells...Bump your levels of this to above 10% and you’ll make your body virtually flu-proof– causing these cells to basically chew up and spit out any infected cells it is in contact with.” Nine simple ways to ramp up your levels is supplied in the article.

- “The AI Threat to America and Democracy”
“AI-enabled tech will be capable of surveilling, micro-targeting, and influencing democratic populations in ways that were previously impossible through traditional state monitoring and privately-developed social media algorithms. AI will be able to find minimum winning coalitions in n-dimensional political space to determine short- and medium-term political goals, for example, and then influence those populations through AI content production already on display in applications, such as DALL·E 2 for art, and Jasper, Writesonic, and Copy.ai, for everything from social media and chatbots to literature and scientific papers.”
