- ★ **“Study Linking Hydroxychloroquine to Increased Deaths Frequently Cited Even After Retraction”**
“An investigation has found that among the hundreds of COVID-19 research papers that have been withdrawn, a retracted study linking the drug hydroxychloroquine to increased mortality was the most cited paper. With 1,360 citations at the time of data extraction, researchers in the field were still referring to the paper “Hydroxychloroquine or chloroquine with or without a macrolide for treatment of COVID-19: a multinational registry analysis” long after it was retracted. Authors of the analysis involving the University of Wollongong, Linköping University, and Western Sydney Local Health District wrote (pdf) that “most researchers who cite retracted research do not identify that the paper is retracted, even when submitting long after the paper has been withdrawn.””

- **“Brace yourself! Why managers should adopt a synthetic media incident response playbook in an age of falsity and synthetic media”**
“Although we have long used manipulation to create a sense of falsity—from analog to digital techniques—falsity has arguably never been as hard to discern as it is now with the emergence of synthetic media manipulation. With an increasing quantity and quality of synthetic media, we find ourselves exposed to a new type of imitation game. We are particularly susceptible to believing synthetic media due to its ability to portray phenomena in a seemingly veridical manner using a high degree of...”

- **“Why Are Scientists Concerned About 5G?”**
“...concerns have emerged regarding potential health effects, with 5G being particularly controversial. While telecommunication companies and regulatory agencies assert that no scientific evidence links cellphone radiation to health problems, many experts disagree. In 2017, 180 international scientists and doctors petitioned the European Union to conduct an independent assessment of the potential health risks associated with 5G.”

- **“UW researcher’s wake-up call on cellphone radiation is finally getting heard”**
“The controversy goes back to a study by Lai and Singh published in a 1995 issue of *Bioelectromagnetics*. They found an increase in damaged DNA in the brain cells of rats after a single two-hour exposure to microwave radiation at levels considered “safe” by government standards.”

- “Industry Conspired to Conceal PFAS ‘Forever Chemicals’ Hazards for Decades, Study Shows”**
“In a shocking exposé of global significance, confidential documents reveal that the chemical industry hid the harmful effects of substances known as “forever chemicals”. Investigation by researchers from the University of California–San Francisco (UCSF), and the University of Colorado revealed the industry’s strategic measures to hinder public knowledge of the toxicity of per- and poly-fluoroalkyl substances (PFAS). Employing similar methods first used by Stan Glantz in his research on the tobacco industry, researchers analyzed documents from chemical companies DuPont and 3M. Newly published in the Annals of Global Health, “The Devil They Knew: Chemical Documents Analysis of Industry Influence on PFAS Science” states that these chemical manufacturing giants were privy to the detrimental effects of PFAS as far back as the 1960s. Yet this crucial information remained a secret from the public until the late 1990s.”

- “Pentagon Accused of Using UFO Technology for Weapon Research”**
“A military whistleblower has made a shocking series of claims. Air Force veteran David Grusch, of the National Geospatial Intelligence Agency, is doing a media tour. He claims that the military has a program that has retrieved downed UFOs, including complete vehicles, and has been reverse engineering these for military weapons programs. He also claims these vehicles come from multiple species of aliens. Among the big claims Grusch makes is that a task force formed by Congress to investigate UFOs, or Unidentified Aerial Phenomena (UAP) as they’re called now, was denied access to these key programs. This is the All Domain Anomaly Resolution Office (AARO).”
