

What Actually is ‘Net-Zero Emissions’?

Net-Zero Emissions is the current strategy to cancel the effects of Anthropogenic Climate Change. Few people are aware of what Net-Zero Emissions (NZE) really means, so what is it?

Simplistically, it’s government control to ensure that humans no longer add any more carbon dioxide to the atmosphere than what they breathe out. That means that **governments will legislate so that all non-essential human activity that produces carbon dioxide ceases.**

We think that means not using fossil fuels to produce electricity (eg coal and natural gas) and removing petrol cars off the road by replacing them with electric cars. We believe that’s all it takes, because that’s what the media and politicians tell us, day after day, over and over again.

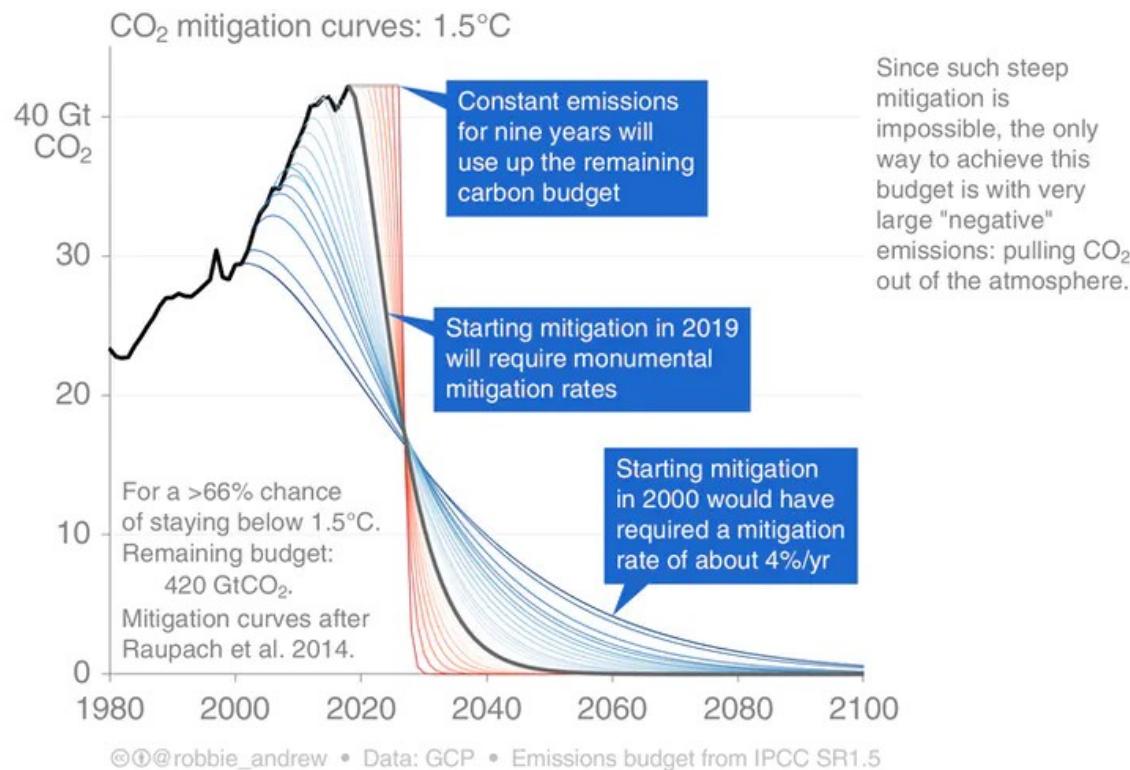

Let’s investigate NZE and find out what it really is.

(1) Why Net-Zero Emissions

The driving force for this is the theory of Anthropogenic Climate Change. This states that humans are changing the climate adversely because of their production of greenhouse gases through of their lifestyles and productivity.

The main greenhouse gas, according to the climate activists, is carbon dioxide. Actually, it’s water vapour.¹ Carbon dioxide and water vapour are all part of life in nature, so they aren’t ‘bad’ gases in themselves. For some reason (think conspiracy here) water vapour is overlooked because it’s easy to directly attribute human activity to the increases in carbon dioxide since the Industrial Revolution².

With CO₂ levels continuing to rise, the plan is to stop this happening by 2050. The graph below shows this plan.³

[theconversation.com/climate-scientists-concept-of-netzero-is-a-dangerous-trap-157368](https://theconversation.com/climate-scientists-concept-of-net-zero-is-a-dangerous-trap-157368)

(2) What's Actually Involved

To achieve this goal of zero carbon (carbon dioxide) emissions by 2050, here's how it's planned to happen:

Acceptables – There are some things which emit carbon dioxide that are considered acceptable. These are: human lives, native animal lives, plant lives, volcanoes, bushfires, accidental fires, etc. These are not intended to be altered, although limiting the world's human population would definitely fit the strategy.

Prohibitions – Anything that emits carbon dioxide in its production or use (and not listed above) will be stopped from occurring. That means all human activities that are not essential for basic living. These include: fossil fuel electricity production, bio-mass electricity production, rubbish burning, combustion engines, domestic animals, metal smelting, and many, many more.

New Technology – The desire of governments who support NZE is that new technologies will emerge which will reduce carbon emissions and eventually eliminate them from our societies. Governments are building this 'dream' into their plans for NZE by 2050. Some of these 'green technologies' will be developed, but the invention of technologies that will stop CO₂ production is a 'pipe dream'.

Carbon Off-sets – To continue using carbon dioxide emitting technologies and activities, governments, business and individuals can carry out other activities which simultaneously remove carbon dioxide from the air. This supports NZE as follows:

$$\text{CO}_2 \text{ production} + \text{CO}_2 \text{ removal} = 0$$

The typical method used for carbon off-sets is planting trees or crops which, through photosynthesis, remove carbon dioxide from the air. The number of trees and area of crops must be able to remove as much carbon dioxide from the air as the carbon emitting activity releases.

The formula above is where the term net-zero emissions comes from – the overall balance is zero.

Carbon Capture – An alternative carbon off-set is capturing the carbon dioxide that's produced and changing it into pure carbon which is stored in the soil, under the ground or somewhere on the land. This is achieved by having a factory that extracts carbon dioxide from the air,⁴ or it is captured during the production cycle of a product that is required for human use. This technique is very expensive, and most efforts so far make the process uneconomical.

(3) What's Hidden

There are important impacts on our life that are hidden from the public by the elite and by the ignorant media. These items aren't brought to our attention because our 'eyes would be opened' and we would revolt against NZE.

With NZE, the following will go: Road transportation of goods, Sea transportation of goods, livestock production, aviation flights, mining, production of construction materials, recreational activities, sport, and more.

(4) What's The Impact

1. Life as we know it will cease to exist.
2. Democracy will transition to total governmental control and then to worldwide authoritarian control.
3. There will be complete economic collapse.
4. Food shortages will lead to mass human death over the whole globe.
5. The world's human population will be reduced and controlled.

4 – UNESCO (20-9-2021) "Carbon capture and storage plant becomes operational in Iceland"
en.unesco.org/news/carbon-capture-and-storage-plant-becomes-operational-iceland

Yes, the real agenda behind NZE is : The world's human population will be reduced and controlled.⁵

That's been the plan since the latter part of the 20th Century with the UN's 'Global 2000' plan to reduce the world's population and maintain it at 6 billion. It now sits under the UN's 'Agenda 2030' plan and under 'Sustainability'. Yes, that's what sustainability is really all about. You should be concerned!

(5) Time to Resist

There is growing understanding that NZE is a recipe for disaster. As few people are aware of what NZE really means, they are supporting a future catastrophe.

It's time we spoke up about what NZE really means and worked righteously against it, not just the false theory of Anthropogenic Climate Change.⁶
